A worked sample by Hemanth Vallamkonda

From first prompt to weekly habit

PDF version of the page at growthforge.github.io/applications/vodafone-ai-pathway/

One role-based AI pathway for account managers, built far enough to judge: take its practice check, walk through one module screen by screen, and see how it is run, measured and repeated for the next role.

Who built this: I build AI tools and train the teams that use them. At MTest Labs, test design fell from an 8-hour day, or 2 to 3 days, to 1 to 3 supervised hours, with a tester approving every case.

5+ years in finance and operations; Microsoft Azure AI Fundamentals (AI-900); MSc Finance and Banking. What I have delivered

Independent work for a job application. Not produced, reviewed or endorsed by Vodafone. Built from public information only.

If I joined: the first 90 days

Days 1 to 30

Learn the AI learning strategy and impact framework [1], map what exists, agree the reporting data. **Exit: the account-manager brief, signed.**

Days 31 to 60

Prototype stage one with five account managers and two team leaders; set the baseline. **Exit: a tested stage one.**

Days 61 to 90

First cohort live in one market. **Exit: its stage one report and the next brief.** A second market waits for the week-12 report.

This builds on what Vodafone has already built rather than starting fresh: Copilot Skill Labs, its champions and agents such as the RFP Assistant, recognised with a 2025 DWG award for AI Enablement at Scale. [2]

What this shows, against the role's responsibilities

Academy strategy and design
A blended pathway, from a live kick-off to a work sample, and where it sits in a portfolio across functions and markets

Content development and curation
One module screen by screen, its prompt card with market notes, and a practice check to take

Vendor and partner management
Curate, buy or build for every module; partners held to one quality check and example service levels

Impact
Four reporting terms, what never counts as impact, and a week-12 report

Would you send this? ILLUSTRATIVE

The practice check from module M3, its fifth screen: three drafts, about three minutes. The customer is fictional.

Copilot drafted each message from these notes. What would you do with each draft?

Larchmoor Freight (fictional): meeting notes, Tuesday

- Renew the mobile plan for 60 drivers before the contract ends in March.
- Asked about tracking for 25 trailers. No pricing discussed.
- Asked whether tracking data is stored in the UK. You said you would check.
- Next step: a summary, and a call with a solutions specialist, who is free Thursday at 10:00 or Friday at 14:00.

Draft 1 of 3

> Thank you for Tuesday. You would like to renew the mobile plan for your 60 drivers before March, and to know more about tracking for your 25 trailers, which we will include at no extra cost. I will confirm where tracking data is stored. Could we speak with our solutions specialist on Thursday at 10:00 or Friday at 14:00?

Expected: Fix it, then send. Nobody offered tracking at no extra cost, and nobody asked for a price. Your notes can put this right on their own: delete the clause and send. The check: underline every commitment and find it in the source.

If you chose Send it: 'At no extra cost' is a commitment nobody made.

If you chose Stop and escalate: Close, but this one is yours to fix. Nobody asked for a price, so nobody needs to decide one: delete the offer and send.

Draft 2 of 3

> Thank you for Tuesday. You would like to renew the mobile plan for your 60 drivers before March, and to know more about tracking for your 25 trailers. I will confirm where tracking data is stored. Could we speak with our solutions specialist on Thursday at 10:00 or Friday at 14:00?

Expected: Send it. Every statement is in the notes, including the specialist's two times, and the draft decides nothing that is not yours. The data question stays an action: route it to the right specialist today, whatever happens to the draft. Not every AI draft needs changing; the skill is knowing which ones do.

If you chose Fix it, then send: There is nothing to fix: each sentence traces to the notes. Editing a good draft spends the time the tool saved.

If you chose Stop and escalate: The draft makes no decision for anyone else. Route the data question to its specialist, and send this summary.

Draft 3 of 3

On Wednesday the customer replies: "Can the new plan start in January, at our current price? We need to know by Friday." Copilot drafts your answer:

> **Yes, we can start your new plan in January at your current price. I will send the paperwork today.**

Expected: Stop and escalate. The customer is asking for a decision on price and contract dates, and the draft makes it for you. Nothing in your notes can put that right; only whoever approves pricing and terms can. Do not send. Take the request to them today, and tell the customer when to expect an answer. The rule: fix what your notes can put right; escalate what only someone else can decide.

If you chose Send it: It agrees a price and a start date that nobody with the authority has agreed.

If you chose Fix it, then send: Rewording cannot supply the decision. A reply saying you will check is the holding line that goes with escalating; the request itself still needs its owner.

Module M3, screen by screen
Notes to follow-up in 15 minutes

Every module in the pathway follows this shape.

1 **Objective** — 1 min

"You will turn your own meeting notes into a follow-up that promises only what the notes support."

2 **Hook from a real task** — 1 min

A follow-up that promised a delivery date nobody agreed reaches the customer's finance director. "What went wrong?"

3 **Worked example** — 3 min

A captioned recording: the prompt built in four parts from the Larchmoor notes (goal, context, source, expectations).

4 **Good and flawed output** — 2 min

The same prompt, two drafts. "Underline every commitment and find it in the notes."

5 **Practice** — 3 min

The three "Would you send this?" drafts.

6 **Feedback** — 1 min

Each choice gets its own feedback, naming the rule: fix what your notes can put right; escalate what only someone else can decide.

7 **Check** — 2 min

One new scored draft. The same rule returns in the stage two observed task.

8 **Job aid handover** — 2 min

Save the card to the team library and use it on your next real follow-up this week.

Every screen: captions and a transcript for any recording, no timer, usable by keyboard alone, plain sentences. Designed to WCAG 2.2 AA. [3]

Reasoning, narration and build rules for each screen: M3 storyboard (Markdown, in the pack).

The card M3 hands over

Every card has this anatomy. Support fades in order: a worked example in stage one, a guided template in stage two, your own prompt in stage three.

M3 Notes to follow-up

ILLUSTRATIVE

For Account managers, after any customer meeting **Owner** Skill Lead (to be agreed) **Version** 0.4, review by 1 February 2027

Task. Turn your meeting notes into a follow-up the customer can act on.

Prompt

Worked example

Goal: Draft a follow-up email to the Operations Director at Larchmoor Freight after today's meeting.

Context: I am their account manager. They want to renew their mobile plan and asked about trailer tracking.

Source: use only my notes, 'Larchmoor Freight notes, Tuesday'.

Expectations: under 150 words, plain British English, three bullet points, one next step offering the specialist's two times from the notes, and a list of anything you were unsure about.

Guided

Goal: Draft a [type of message] to [who] about [what].

Context: I am [your role]; they want [their aim].

Source: use only [the file or thread].

Expectations: [length], [tone], [structure], and a list of anything you were unsure about.

The four parts follow Microsoft's prompt guidance. Only the goal is required, but the source line is what stops the draft inventing. [4]

On your own

Write the prompt yourself. It passes if it names the goal, names the only source Copilot may use, says what a good answer looks like, and asks Copilot to list what it was unsure about.

Check before you send

- ✓ Every commitment appears in the notes or the contract.
- ✓ Names, dates and figures match the source.
- ✓ Nothing from another customer appears.
- ✓ The tone is one you would sign.

◆ Stop and escalate when

Putting the draft right needs a decision you do not own: price, contract terms, where data is held, or security. Do not send. Ask the owner, and tell the customer when to expect an answer.

A question you said you would check is yours to route: send it to its owner today, whatever happens to the draft.

Data rule

In line with Vodafone's published approach of limiting public AI tools, customer contracts and pricing are used only in approved company tools. [6]

Market notes

Illustrative markets; the academy's own languages are not public. Language support as Microsoft lists it. [5]

UK

Currency GBP. Dates as 3 March 2027. Ask for plain British English in the expectations.

Germany

Currency EUR. Dates as 03.03.2027. Formal address (Sie) for customer emails. Keep the notes in German and ask for German output, so the source and the draft match. German is on Microsoft's supported-language list.

Kenya

Currency KES. Dates as 3 March 2027. Microsoft's language list shows Swahili for voice on personal accounts only, not for text on work accounts, so the card and its checks stay in English, and a fluent colleague checks any customer message in Swahili before it is sent.

More on this card

A good and a flawed draft

Good: "...you would like to know more about tracking for your 25 trailers. I will confirm where tracking data is stored."

Flawed: "...tracking for your 25 trailers, which we will include at no extra cost." Commits to an offer nobody made.

Tool notes

Microsoft 365 Copilot in Outlook or Word: name the notes file in the Source line so the source is explicit. Other approved assistants: the same four parts apply; only the way you attach the source changes.

Why each field is there

- Task and role, because learning starts from the job.
- Four-part prompt, because it matches Microsoft's own prompt guidance.
- Good and flawed draft, because a non-example teaches the check.
- Check, because verification belongs at the point of use.
- Escalate, because the learner needs a named route for decisions they do not own.
- Data rule, because it carries Vodafone's published guardrails.
- Owner, version and review date, because feature names and guidance change, so every card expires.

The pathway

Three stages, twelve weeks

Account managers, because their writing tasks are frequent, checkable against a source and carry customer-data risk. Twelve weeks, because Microsoft's Copilot Dashboard counts a Habitual or Power user only after use in at least 9 of the past 12 weeks, so the result can be read from existing data. [7]

Team leaders, on the same weeks

Before week 1
Briefed

Week 1
Model it

Week 3
Set the standard for 'checked'

Weeks 3 to 9
Protect the 15-minute practice slot

Week 12
Confirm each work sample

Stage 1 **Weeks 1 to 2**
About 90 minutes

First useful result

You can brief yourself for a customer meeting with Copilot, and check every name, date and figure against its source.

Check: six decision items. Can you make the right call in a realistic case? LTEM Tier 5, decision-making. [8]

- Kick-off **Build**
- M1 **Curate**
- M2 **Build**
- Check **Build**

Stage 2 **Weeks 3 to 9**
About four hours

A weekly workflow

You can tell a draft you can send from one you must fix or escalate.

Check: one observed task on supplied, realistic notes, scored on a four-part rubric. Can you do the task well? Tier 6, task performance.

- M3 **Build**
- M4 **Curate**
- M5 **Buy**
- Skill Lab **Curate**
- Practice slot **Build**
- Check **Build**

Stage 3 **Weeks 10 to 12**
About an hour

Own and teach

You can improve a team prompt card, test it on three real cases and teach it to a colleague.

Check: a work sample your manager confirms. Do you do it in real work? Tier 7, transfer to work.

- M6 **Build**
- M7 **Build**
- Check **Build**

Tiers are from LTEM, Will Thalheimer's Learning-Transfer Evaluation Model: the higher the tier, the closer the evidence is to real work. Attendance and completion sit at the bottom, so they never close a stage.

Week 1, live: the 45-minute kick-off ILLUSTRATIVE

For a room or a video call, with a champion in every breakout of five. Then the blend: digital modules in the week, a 15-minute practice slot in each team meeting, a cohort lab in week 6 and a work sample in week 12.

Time	What happens	Facilitator moves
0 to 5 min	Why this pathway: a follow-up that promised a delivery date nobody agreed	Ask who has had to correct a message like it; name the rule the twelve weeks teach
5 to 15 min	What stays out, in plain words, co-presented with a data protection colleague	Show three examples; the room sorts each into approved tools only, fine anywhere, or never
15 to 30 min	A first prompt together, then each person writes one for their next real meeting	Build the four parts live on the fictional notes; champions help in breakouts; customer data stays in approved tools
30 to 40 min	Check before you send, in pairs	Partners swap drafts and underline every commitment; collect one fix and one escalate for the whole room
40 to 45 min	Commit	Each person names the real meeting they will brief with M1 this week

> **Follow-up task, by the week 1 team meeting:** complete M1 (20 minutes) and use it to brief yourself for one real meeting. The team leader opens that meeting by modelling one prompt of their own, then asks: which name, date or figure did you check?

Script lines, materials, the online variant and the team leader's "Model it" briefing: kick-off run sheet (Markdown, in the pack).

Curate first, buy second, build only what Vodafone alone can write: its data rules, checks and examples.

Curate: M1 and M4, from Microsoft's training, including Copilot Academy, whose role-based paths include sales. [9] The cohort lab runs inside Copilot Skill Labs if their format suits. [2]

Buy: M5, from licensed library content. Skillsoft is a named partner for this role, and a 2023 award submission records the VLO licensing Skillsoft and Harvard content. [10]

Build: the kick-off, M2, M3, M6, M7 and every check. About six and a half hours in all, over twelve weeks.

Every module with its minutes, week, source and owner, and the stage two rubric: module plan (Markdown, in the pack).

How would you know it worked?

The VLO business impact framework is not public, so I would report in four terms and align them with it in my first weeks. Three answer the measures this role tracks: capability growth, AI adoption and productivity impact. Experience adds the learner's view.

Term, and the question it answers	Evidence I would use	What it cannot show
Experience Learner reaction: did it help with the job?	"Useful for my task?" after each module, and "used it at work this week?" in the weekly practice slot	Whether anything was learned
Quality Capability growth: can they make the call?	Module checks, stage checks and the observed task, scored	Whether they do it at work, unprompted
Learning transfer AI adoption: is it a weekly habit?	Novice to Habitual or Power users over twelve weeks in the Copilot Dashboard, against a comparison group	Whether the use is good use
Business impact Productivity: did the work get better?	Time to a checked follow-up, and follow-up quality in a blind review, against a baseline and a comparison group	Cause, without a designed comparison

Never reported as impact: completions, logins, licences, satisfaction on its own, or self-reported minutes added together.

Mind the baseline window. Microsoft reports email draft and summary metrics were underestimated from 1 June 2025 to 18 February 2026. A baseline there understates the start; a comparison across it overstates the gain. [7]

What a week-12 report would show

ILLUSTRATIVE

One cohort of 40 account managers against a comparison group of 40. Illustrative, not Vodafone figures.

A direction, not a cause, until a second cohort repeats it.

Recommendation: revise M4 first. Fewer than 4 in 10 learners chose the expected answer on its module check (15 of 40, under the item bank's review line), and it had the fewest learners using it at work (17 of 40), so the scenario or its feedback needs work. Then extend to a second market from week 13.

Experience, quality and results by module

Experience

Used it at work that week, asked in the weekly practice slot: from 31 of 40 (M1) down to 17 of 40 (M4). M4 was also rated least useful for the task.

Quality

Stage one standard met by 34 of 40; the observed-task standard by 29 of 40. Module checks are in the table below.

Module	Module check: chose the expected decision	Used it at work that week
M1 Brief me before the meeting	35 of 40	31 of 40
M2 What stays out	33 of 40	24 of 40
M3 Notes to follow-up	31 of 40	30 of 40
M4 Tailor the proposal section	**15 of 40**	**17 of 40**
M5 Account plan refresh	28 of 40	22 of 40
M7 Reviewing an agent's draft	30 of 40	19 of 40

M6 is a team-meeting module with no digital check: learners improve a card and teach it back, so it is read from the cards contributed and the stage three work sample. The review line is a module check where fewer than 4 in 10 learners choose the expected answer.

How this scales

One brief per pathway

In this design, every pathway starts as a one-page brief that the Skill Lead and the Learning and Performance Business Partner sign before anything is built. Here it is, filled for this pathway.

Choosing the next role and market

- ✓ Frequent tasks that can be checked against a source.
- ✓ A real data or commitment risk the check can teach.
- ✓ A Skill Lead and a Partner ready to own it.
- ✓ Reporting is possible: job-function data loaded, and groups large enough to show, because the Copilot Dashboard hides small groups.
- ✓ The tool supports the market's language for the task.

Questions I would ask before drafting a brief

- Which three writing tasks take the most time each week?
- Which mistake would cost most with a customer?
- What data does the role touch, and where may it go?
- Who signs off a commitment, a price or a data answer?
- What already exists for this role: library content, Skill Labs, Copilot Academy?
- Which team leaders will give the practice slot fifteen minutes a week?

Pathway brief: account managers

ILLUSTRATIVE

Field	This pathway
Role and real tasks	Account managers: meeting brief, follow-up, proposal section, account plan
Pilot market	To be agreed
Data rule	Contracts and pricing only in approved company tools
The check	Every commitment traced to the notes or the contract
Escalate	Any reply that needs a decision on price, contract terms, where data is held or security
Team leaders	Model it, set the standard, protect the practice slot, confirm the work sample
Who owns what	**Skill Lead:** tasks, standard, stage checks **Learning and Performance Business Partner:** market, cohort, team-leader time, local examples **Specialist:** design, curation, partners, quality check, report **The teams that own Copilot reporting and HR data:** the job-function data
Signed	Skill Lead _____ Learning and Performance Business Partner _____ Date _____

One pathway in an academy portfolio ILLUSTRATIVE

How AI enters capability plans across all areas: one brief per role, started in sequence, each gated by its own evidence.

Pathway	Quarter 1	Quarter 2	Quarter 3	Quarter 4
Account managers this pathway	**Discover**, then **Pilot** in one market	**Pilot**: the week-12 report	**Extend** to a second market	**Scale** to further markets
Customer care team leaders	Not yet	**Discover**: brief signed	**Pilot** in one market	**Extend** to a second market
Network operations	Not yet	Not yet	**Discover**: brief signed	**Pilot** in one market
HR and finance business partners	Not yet	Not yet	Not yet	**Discover**: one brief each

Discover: brief signed. **Pilot:** one cohort, one market. **Extend:** a second market, only after the week-12 report. **Scale:** further markets, cards localised. Every pathway reuses the data-rule module and the card anatomy; one new brief a quarter keeps quality ahead of reach.

The same brief applied to four more roles

To be confirmed with each Skill Lead. The prompt and the check keep their shape whichever approved tool a role uses.

Role	Top tasks	Data rule	The check	Tool
Customer care team leaders	Coaching notes from call reviews; shift handover summaries	Customer account details only in approved tools	Every coaching point traced to the call record	Microsoft 365 Copilot
Network operations	Incident updates for stakeholders; change write-ups	No network configuration or site details outside approved tools	Every time and impact figure traced to the incident log	Claude or ChatGPT Enterprise, where approved for the team
HR business partners	Policy answers; job descriptions	No employee personal data in a prompt unless the tool is approved for it	Every policy answer cites its clause	Microsoft 365 Copilot
Finance business partners	Variance commentary; board-pack summaries	Unpublished results only in approved tools	Every figure ties to the ledger	Copilot in Excel

Partners, held to one standard ILLUSTRATIVE

Curated and bought content passes a seven-question quality check before it goes live. Each partner is reviewed quarterly against written terms, and the review decides renewal. The service levels shown are examples to agree; no partner is scored.

Partner	Supplies	Terms to agree	The quarterly review decides
Microsoft	Copilot Academy paths, duplicated and customised for M1 and M4 [11]	Notice of feature changes; our copies re-checked within an agreed time	Keep, adapt or drop each unit
Licensed library	Skills content such as Skillsoft's, for M5	For example: wrong or unsafe guidance fixed within 2 working days, other fixes within 10; 30 days' notice of content changes; monthly usage data	Renewal on use and usefulness, not seats
Google	The employee gen AI training programme committed in the 2024 partnership, where it suits a role [12]	Scope, languages and dates, per role	Which pathways it serves
A content agency	Built modules, from our storyboards	For example: a built module within 15 working days of a signed storyboard; the same fix times; WCAG 2.2 AA sign-off; editable source files	The next brief's build

The seven questions, example service levels by severity and the review agenda: partner quality check (Markdown, in the pack).

Take the pack with you

Kick-off run sheet and team-leader briefing Markdown	**Pathway brief template** Markdown	**Filled brief: account managers** Markdown
Partner quality check Markdown	**Metric dictionary** CSV	

Enablement I have delivered

I build AI tools, train the people who use them, and write work up so others can reuse it.

MTest Labs. I built a test-design tool on the firm's own test-case library and issue logs, added an assistant the team could ask about the firm's knowledge, and trained the team to run it. The testers stay the subject-matter experts: the tool drafts each case and a tester approves it before it reaches a client. Test design fell from an 8-hour day, or 2 to 3 days, to 1 to 3 supervised hours.

Bnk To The Future. Templates I created were adopted across the firm. With redesigned case routing, triage and escalation, turnaround fell by ~25% across 100+ cases.

A university enterprise network. I captured sessions as structured, reusable documentation with worked use cases, so others left with practical material.

AirTM. In a remote team matching daily payment volumes across currencies, I wrote root-cause fixes up as standard procedures, held a 95%+ service level, and cleared a 150-case backlog in three weeks.

Across countries: 5+ years in finance and operations, spanning client work for an accountancy practice in India, VAT return support for UK clients and the remote international team at AirTM. I use Microsoft Copilot and Copilot Studio, Claude, ChatGPT and Gemini, and hold Microsoft Azure AI Fundamentals (AI-900).
